

Yes, that's right. Toss your sunscreen in the trash if it contains any of these questionable chemicals:

- **Para amino benzoic acid...**
- Octyl salicylate...
- **Avobenzene...**
- Oxybenzone...
- **Cinoxate...**
- Padimate O...
- **Dioxybenzone...**
- Phenylbenzimidazole...
- **Homosalate...**
- Sulisobenzene...
- **Menthyl anthranilate...**
- Trolamine salicylate...
- **Octocrylene...**

Potentially harmful chemicals such as **dioxybenzone** and **oxybenzone** are some of the most powerful free radical generators known to man!

So if your sunscreen contains dioxybenzone, oxybenzone, or any of the other chemicals from above, I highly recommend you switch to a formula that is safe and healthy for your skin.

Toss your sunscreen in the trash if it contains any of these chemicals that are considered to be potentially harmful.
